1) Tell me about yourself?

Hello sir/madam good morning,

My name is Haripriya and I'am from chittoor.

I have completed my post graduation in MCA from SVCE college, completed a project on Development of hybrid image caption generation, and I'm eager to start my career in data analytics. I'am hardworking, quick learner, and adaptable to new environments.

Thank you for giving me this opportunity.

2) Why did you choose a career in data analytics?

I choose data analytics because it matches to my skills and interests. I love working with data to find meaningful insights that can help businesses make better decisions. It combines my strengths in Problem-solving, logical thinking and curiosity about how things work.

3) what do you know about our company and why do you want to work here?

Your company is known for innovation and employee growth. I want to be part of that growth using my data analysis skills to help uncover insights that support smarter decisions and continued innovation.

4) Describe a time when you faced a challenge in a project and how you handled it.

During my excel Project we were developing a new reporting dashboard that relied on data from multiple sources. We discovered that one of the key data APIs was unreliable & frequently returned incomplete information. This caused major delays. If first analyzed the API logs to pinpoint the failure patterns & documented which data fields were most affected. Temporary implement data aching layer

that stored the most recent valid results.

5) How do you handle tight deadlines or pressure at work?

I break work into smaller tasks, set priorities and complete the important task first.

6) How do you explain complex data insights to non-technical people?

When explaining data insights to non-technical people, I focus on simplifying the message & connecting it to their goals or decisions. Instead of diving into technical details like models or statistical terms, I translate the findings into clear, business-relevant language.

7) Describe a situation where your analysis or recommendation made a positive impact.

As a data analyst, I was asked to review customer engagement data for our subscription service. When I analyzed the date, I noticed a clear pattern users who didn't complete their profile within the first three days were twice as likely to cancel within the first month.
I request to introduce a checklist & automated email reminder to encourage users to finish their profiles.

8) How do you handle feedback or criticism?

I see feedback as an opportunity to learn and improve. Whenever I receive feedback, I make sure to listen carefully without getting defensive, and I ask clarifying questions if something isn't clear.

9) What are your short-term & long term career goals?

short term goal: My goal is to work in a reputed organisation which can enhance my skills.

long term goal: Aim to take on managerial or expert-level positions where I can influence strategy and guide others.

10) what motivates you to do your best work?

Learning new things, solving challenges and achieving goals motivate me.
